

Joeal Bijoy Thomas

Newark, DE | joealthomas4@gmail.com | LinkedIn

Summary

Master’s student in Data Science with hands-on experience in predictive modeling, customer analytics, machine learning, and NLP. Proficient in Python (pandas, NumPy, scikit-learn), SQL, Power BI, and AWS, with a proven ability to build end-to-end pipelines and translate complex datasets into actionable business insights.

Education

University of Delaware	Newark, DE
<i>M.S. in Data Science</i>	Aug. 2025 – Present
Coursework: Regression Analysis, Applied Multivariate Statistics, Database Systems, Big Data Technologies, Mathematical Techniques in Data Science, Analysis & Design of Algorithms	

Indira College of Engineering and Management	Pune, India
<i>B.E. in Computer Engineering</i>	Jun. 2020 – Jun. 2024
Coursework: Machine Learning, Deep Learning, NLP, DBMS, Probability & Statistics, Cloud Computing, Data Visualization	

Skills

ML & AI: Predictive Modeling, Churn Modeling, Customer Health Scoring, NLP, LLMs, scikit-learn, TensorFlow, PyTorch, GenAI, Prompt Engineering

Data Analytics: EDA, Cohort Analysis, Time-Series Forecasting, Statistical Analysis, Regression, pandas, NumPy, Advanced Excel

Programming: Python, SQL, R, JavaScript **Tools & Platforms:** Power BI, Tableau, AWS (Fundamentals), n8n, Figma

Experience

University of Delaware	Newark, DE
<i>Teaching Assistant (AV Team)</i>	Jan. 2026 – Present
• Manage and coordinate 20+ technicians for AV operations, software upgrades, and university-wide event support.	

The Blue Fox Media	Pune, India
<i>Data Analyst Intern</i>	Feb. 2025 – Jul. 2025
• Queried and transformed large structured datasets using complex SQL, improving query performance by 40% and enabling faster customer KPI reporting.	
• Conducted advanced EDA in Python (pandas, NumPy) to uncover behavioral trends and engagement drivers, contributing to a 20% ROI increase; designed Power BI dashboards that reduced reporting time by 25%.	

Dentsu	Banar, India
<i>Associate Business Analyst</i>	May 2024 – Nov. 2024
• Analyzed Google Ads & AppsFlyer behavioral data to build predictive audience models profiling high-value retained customers, driving a 3–4× increase in Tata Play Binge subscriptions.	
• Reduced CAC by 30–40% through cohort-level tracking, before/after analysis, and iterative ML model optimization; engineered cloned audience segments improving targeting precision by 75%.	
• Automated reporting workflows using JavaScript & Excel, cutting manual reporting effort by 80%.	

Projects

Automated Report Workflow & Chatbot Assistant	n8n, LLM, Python
• Deployed an end-to-end automated reporting pipeline using n8n; built an LLM-powered chatbot for conversational querying of reports, extracting insights from unstructured data using generative AI.	

Demand Forecasting for Supply Chain Optimization	Python, Power BI
• Developed time-series forecasting models (ARIMA, Prophet) achieving a 15% improvement in MAPE; engineered features from seasonality and trends to optimize inventory decision-making.	

Indian Food Image Classification	Vision Transformer (ViT), Python
• Achieved 94% classification accuracy using Google’s ViT model; integrated calorie recommendations and deployed as a standalone .exe application.	

King County Housing Price Prediction	R, Statistical Modeling
• Built a multiple linear regression model using log-transformations and backward elimination, explaining 82% of price variance; validated via residual analysis and VIF checks.	

Certifications & Publications

Google Data Analytics Professional Certificate (Mar. 2023)	Published 2 research papers in peer-reviewed journals in the field of Computer Engineering.
